Arrival

The external lights illuminating the hotel's front help make a positive impression. Whether to create amazing light plays or to exhibit aesthetic rigour, the lights illuminating a hotel as soon as visitors arrive will tell them about the quality they can expect inside. Well-kept gardens with ambient lights, illuminated entrance paths, safe parking areas give visitors seeking for relaxation after a long journey a feeling of comfort.

pag. 10

Reception

Reception areas (front desks and lobbies) must be well-illuminated to prevent visitors from feeling disoriented when they enter the hotel. It should be made clear where they can check in, find a restroom, leave their luggage, etc...). In these areas, lights can play a key role for creating a positive first impression.

pag. 38

Accommodation

Hotel rooms with a skilfully designed lighting system can achieve superior quality levels. The pleasure of staying in a comfortable room increases guest's satisfaction. Dimmable lights allow them to decide the desired lighting level during different moments of the day.

pag. 74

All inclusive

Hotels offer their guests many different types of spaces. Lounge areas with couches and soft chairs where guests can relax, rooms where they can have breakfast and restaurant rooms where they have lunch and dinner, fitness rooms, as well as spas, swimming pools and gyms. On terraces and in gardens and outdoor areas lights are fundamental for creating a sense of aesthetics and comfort. Even in these secondary zones, a carefully designed lighting system makes environments particularly pleasant to enjoy.

pag. 106

Technical areas

There are many people working in a hotel both directly with guests and "behind the scenes". These people require lights with specific technical features in order to perform their tasks in a safe and accurate way. In kitchens, storage rooms and laundry rooms, it is best to install customized lighting systems.

pag. 136

☆☆☆☆
Hotel collection
☆☆☆☆

An extensive selection of LED lighting fixtures for hotels, bars and restaurants.

Decorative lights, technical lights and top-performance lights that together consider the diverse lighting needs in every area of a hotel.

Hotel lighting

The hotel industry has changed deeply in the last few years. Today, many different types of hotel exist: boutique hotels, artistic hotels, diffused hotels and many other variants of the classic hotel.

The competition with other forms of accommodation, such as B&Bs, is forcing hotels to personalize their structure. Every hotel must now have a strong brand image to make a memorable experience for their guests. Lighting is fundamental for creating an attractive, personalized hotel capable of offering guests a pleasant and enjoyable stay.

In summary, lights are not just decorating elements, but they are the true protagonists of the hotel's ambience.

To enhance architectonic and decorating solutions.

A good lighting system fitting innovative LED lights enhances the architecture and the decor characterizing a hotel. No matter the style chosen, whether it is to focus on simplicity, luxury or originality, lighting is the element that gives life to spaces, designing them and creating the mood. With LED sources, lighting designers have many more design choices compared to conventional sources. For example, a LED fixture can be easily inserted into architectonic and decorating elements, creating amazing settings. Different types of fixtures also allow monitoring the spaces, in the best way possible, characterizing the environments based on their diverse uses, such as the relaxation areas, lobbies, conference rooms.

Ecologic sources and new technology

Good lighting choices can say much about a hotel. When visitors enter a hotel they need to perceive a carefully studied and contemporary design.

The choice of LED sources is a tell-tale sign of a hotel's interest in environmental issues, favouring energy-saving solutions and the use of cutting-edge technologies.

In this sense, LEDs, in addition to offering a notable advantage in terms of energy consumption and therefore lower costs, also allows characterizing the hotel as an eco-sustainable structure.

In a quality hotel, guests expect a technologically updated system. LED fixtures, even without using highly sophisticated fixtures, offer a high-quality lighting system, capable of being modulated and much more flexible compared to conventional lighting systems.

To create the mood and a memorable brand image

The right lighting in hotel rooms and common spaces creates the mood that characterizes the structure and establishes an emotional relationship with guests. Today, LEDs allow lighting effects with a strong impact, both outdoors and indoors. Linear spotlights and fixtures, with compact dimensions, can be placed in decorating elements, and the use of different colours and diverse lighting scenes can turn a short stay into an experience to remember.

Good lights help guests remember their stay in a positive way and make perfect shots that can be posted on social media, increasing the hotel's popularity.

Energy savings, functionality and personalization

The advantages of LEDs are not just aesthetic. In hotels, some areas need to be illuminated all the time, so lighting usually accounts for the biggest item on the energy bill.

A LED lighting system is therefore particularly suited in the hotel industry also for the favourable impact on costs. Savings are given by the LED sources that absorb up to 70% less energy compared to old lamps and by lighting controllers, such as lighting and presence detectors that allow notable savings by avoiding wasting energy and switching lights on unnecessarily. Sensors can dim lights based on the amount of day-light in the room, using lights only when and where needed.

Renovate to save!!

Fixed costs and variable costs of energy consumption

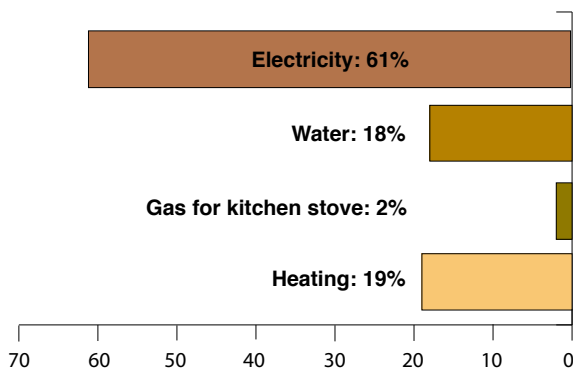

It is well-known that there are fixed and variable costs in the energy consumption of hotels.

In terms of variable costs, much can be saved using an energy efficient lighting system.

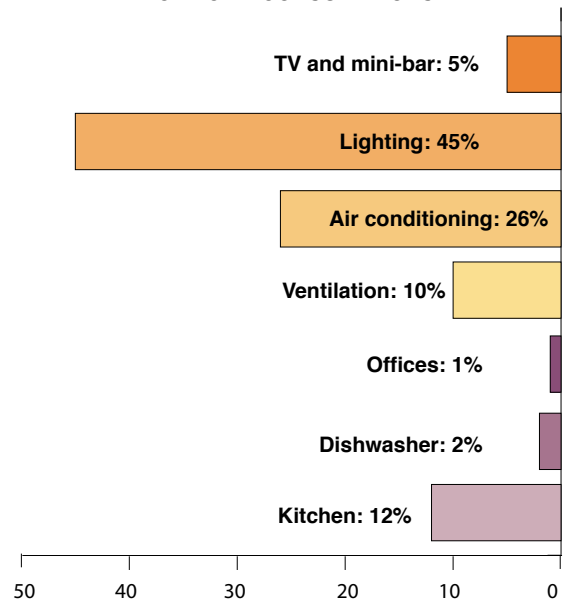

The costs of electricity (amounting to about 61% of total variable costs) depend on seasons (26% for air conditioning and 10% for ventilation, while other costs depend on the room's use (conference rooms) or occupancy (TV, mini-bar, lights in the room and bathroom, corridors).

With the LED technology, hotels can save up to 85% of their energy costs both in the areas where lights stay always on (entrance hall, reception desk, kitchens, etc.) and in the areas where lights are consumed on-demand (room occupancy, parking areas, corridors, technical rooms).

ENERGY COSTS

ELECTRICITY CONSUMPTIONS

1: switching to the LED technology

There are many reasons for switching to the LED technology. A skilful relamping project allows saving up to 85% on energy bills!

	LED	CFL	HALOGEN	INCANDESCENCE
Life	Very long 50.000***	Long	Medium	Short
Energy used	Very low	Low	Medium	High
Energy consumption	15%	25%	78%	100%
Average energy savings	Up to 85%	Up to 75%	Up to 28%	0%
Running costs	Very low	Low	Medium	High
Environmental impact	Very low	Low	Medium	High
Availability	Very high	Medium	No longer allowed	No longer allowed
				

2: relamping

- Before relamping your lights, with just a few easy tricks, you can also save on installation costs. For example:
- In hotels with false ceilings made up of panel modules, you can use Pannello LED fixtures.
- With existing recessed spotlights, it is possible to install a new LED source using the same spotlight holes or only slightly bigger. All you need is a Forstner drill to make a bigger hole without changing the false ceiling.
- In this brochure we selected some products that have a life of 50000 (***) or higher: this will make you forget about the costs for changing broken or worn out lamps for a very long time.
- Free-standing installation: the products displayed in this brochure do not require particular mounting tools or methods. Moreover, they do not need to be opened for internal cabling purposes because they are already ready for use.

3: smart lighting control

- Not all the areas of a big hotel are occupied or used all the time. Some spaces such as corridors, stairways, restrooms, conference rooms and recreational rooms may require the installation of special lighting dimmers. This brochure contains a selection of lighting fixtures with dimmable and DALI cabling that allow you to control lights using products that range from ELEMENTARY solutions to very complex lighting management systems. For example:

ELEMENTARY SOLUTION PLUG & PLAY systems with on-board sensors:	<ul style="list-style-type: none"> • Solution with built-in sensors • Sensors attached to the lighting body and visible • Programming via app or remote control of sensors or trimmers • "PLUG&PLAY" no installation difference with a non-dimmable product • The installer and the user do not require specific skills because the lighting fixture is configured to change lighting levels automatically • No additional cabling • No centralized controls • No programming and commissioning from specialized technicians • No remote communication
MEDIUM SOLUTION CABLED solutions for DALI dimmable fixtures:	<ul style="list-style-type: none"> • The lighting fixture is equipped with a DALI PUSH DIM LED driver • Simple additional cabling and possibility to use a standard NO switch
ADVANCED SOLUTION High-tech WIRELESS solutions to be managed via app:	<ul style="list-style-type: none"> • System equipped with smart sensors with high level of automation • Easy-to-use app and software that do not require skills from specialists (e.g. DALI commissioning or software engineer) • Built-in or external sensors and, if requested, additional cabling that does not require complex circuitry
SMART SOLUTION COMPLEX solutions requiring lighting management hardware and software:	<ul style="list-style-type: none"> • Wired and wireless solutions • System with all fixtures and sensors are managed with the BUS link (or over the air) with the possibility of a limited, but extremely simple, management • Possibility to configure via app/smartphone/tablet • Suitable for medium-small systems • Variable complexity, including situations that may require the intervention of specialized workers (e.g. commissioning) • Scalable

4: also save outside

Amenity and street lighting fixtures are equipped with the latest generation of programmable drivers that allow controlling different aspects and functions of a lighting system:

OPERATING MODE	DESCRIPTION		
Luminous flux setup	This can be done by programming the drive current values requested when ordering/purchasing the fixture	✓	✓
Virtual Midnight order with subcode -30	Stand-alone system with automatic luminous flux reduction in 4 steps (up to max 8 steps available upon request)	✓	
Broadcast Prog	This allows the reconfiguration of the Virtual Midnight profile, including the enabling/disabling of all the fixtures installed on the same power line (broadcast function) via a sequence of electrical impulses.	✓	
Mains voltage regulation	This allows varying the luminous flux by adjusting the mains voltage between 170 and 250 V AC	✓	
CLO (Costant Light Output)	The lighting fixture maintains a constant light output throughout its entire service life	✓	
DC power in EM	In centralized emergency systems, the LED Driver automatically detects when the power changes from AC to DC and adjusts the lights to a pre-set value (DC level)	✓	
Monitoring (default)	The driver is equipped with a micro-processor that records the operating conditions from the moment it is turned on	✓	
Setup via APP	The NFC technology allows users to set the different operating modes via an APP	✓

Mounting: rapid connection, the fixture does not need to be opened.

Tile is a wall sconce with a linear design and compact dimensions, which includes a special reflector to achieve wall washing lighting effects. Its high degree of protection (IP65) makes it ideal for indoor and outdoor lighting applications.

Housing: in painted aluminium with matt glass diffuser, designed for wall-mounting.

LED: power factor: >0,9. Photobiological safety class: exempt group.

Vertical Line is a wall sconce with a linear and compact dimensions; Its design allows obtaining a soft, evenly distributed glow for direct or indirect lighting.

Housing: in painted aluminium with glass diffuser, designed for wall-mounting.

LED: power factor: >0,9. Photobiological safety class: exempt group.

Flat is a wall sconce with an ultra-slim design. With very small dimensions, it can be easily fitted into any architectural context, while its high degree of protection (IP65) makes it ideal for indoor and outdoor lighting applications.

Housing: in painted aluminium, wallwasher lens version in clear polycarbonate and diffuser version in matt polycarbonate, designed for wall-mounting.

LED: power factor: >0,9. Photobiological safety class: exempt group.

Lucerna

Technical Specifications: housing, lid, spokes, and connection for die-cast aluminium pressed poles.

Diffuser: tempered glass, 5 mm thick, withstands thermal shock and impacts.

Coating: the standard liquid immersion coating consists of a first metal surface pre-treatment stage, a successive epoxy cathaphoresis corrosion and salt resistant coating, and a final layer of bi-component acrylic liquid UV-stabilised coating.

Equipment: nylon wiring plate, 30% fibre glass, removable, tool-free, for quick maintenance. Standard knife switch, which enables to automatically cut off the power supply during maintenance. Complete with quick-connector for connection to the line. Can be adjusted by loosening the bolts without taking the lighting fixture apart. Temperature control device. In the event of an unexpected LED temperature rise caused by particular weather conditions or a LED failure, the system will reduce the luminous flux to lower the working temperature and guarantee proper operation.

LED: power factor: $\geq 0,9$. Photobiological safety class: exempt group.

VIRTUAL MIDNIGHT

To increase energy savings at night when there are fewer people and vehicles around, a lighting fixture can be programmed according to a specific profile (customizable on request). The fixture reduces its luminous flux through a self-learning process which, depending on the previous switching on and off times, will determine a hypothetical "virtual midnight". This is the average value between the time the fixture is switched on (sunset) and switched off (sunrise). The "virtual midnight" is the reference point for dimming lights according to the desired profile. The device is integrated in the LED driver and therefore does not require any modification to the system. *In order for the system to function correctly, the system must be adjusted by a device that turns the system on and off on a regular basis every day.*

Factory settings	
Time	Flux
on ÷ 22:00	100%
22:00 ÷ 23:30	75%
23:30 ÷ 02:30	50%
02:30 ÷ 04:00	75%
04:00 ÷ off	100%

Virtual Midnight subcode -30: fixtures are equipped with a device to reduce flux in **4 steps** based on the calculation of the virtual midnight.

ATTENTION: original settings and time slots for the "virtual midnight" value can be customized in up to 8 steps upon request.

Volo

Housing and frame: pressed in die-cast aluminium and designed with a very small surface exposed to wind. Cooling fins are integrated into the cover.

Pole connection: pressed in die-cast aluminium. Suited for poles with a diameter 60 mm.

Diffuser: extra-clear tempered glass, 4 mm thick, resistant to thermal shocks and impacts (UNI-EN 12150-1: 2001).

Coating: the standard liquid immersion coating consists of a first metal surface pre-treatment stage, a successive epoxy cataphoresis corrosion and salt resistant coating, and a final layer of bi-component acrylic liquid UV-stabilised coating.

Standard supply: automatic temperature control inside the device with automatic resetting. Safety diode to protect against voltage peaks compliant with EN 61547. With dedicated electronic device to protect the LED module. Supplied with connector for mains connection and complete with an air-circulation valve.

LED: power factor: ≥ 0.9 . Photobiological safety class: exempt group.

LUMINAIRE DESIGNED FOR INSTALLATION ON NEMA OR ZHAGA SOCKET: to monitor and manage public lighting centrally, lighting fixtures will always be more equipped with wireless controls that will allow their integration with the IoT. Today the market offers two solutions: **NEMA** and **ZHAGA**. Both solutions offer an electrical and mechanical connection between the control antenna and the lighting fixture.

Example with Zhaga Socket (subcode -0054)

Nema Socket order with **subcode -40**
 (sealing cap to be ordered separately)

Zhaga Socket order with **subcode -0054**
 (complete with sealing cap)

Mounted directly on the fixture's body, ideal for remote lighting management applications.

VIRTUAL MIDNIGHT

To increase energy savings at night when there are fewer people and vehicles around, a lighting fixture can be programmed according to a specific profile (customizable on request). The fixture reduces its luminous flux through a self-learning process which, depending on the previous switching on and off times, will determine a hypothetical "virtual midnight". This is the average value between the time the fixture is switched on (sunset) and switched off (sunrise). The "virtual midnight" is the reference point for dimming lights according to the desired profile. The device is integrated in the LED driver and therefore does not require any modification to the system. *In order for the system to function correctly, the system must be adjusted by a device that turns the system on and off on a regular basis every day.*

Factory settings	
Time	Flux
on ÷ 22:00	100%
22:00 ÷ 23:30	75%
23:30 ÷ 02:30	50%
02:30 ÷ 04:00	75%
04:00 ÷ off	100%

Virtual Midnight subcode -30: fixtures are equipped with a device to reduce flux in **4 steps** based on the calculation of the virtual midnight.

ATTENTION: original settings and time slots for the "virtual midnight" value can be customized in up to 8 steps upon request.

Garda

Housing and arms: pressed in die-cast aluminium and designed with a very small surface exposed to wind.

Optics: made of PMMA with high temperature resistance and UV rays.

Pole connection: pressed in die-cast aluminium. Suited for poles with a diameter 60-76mm.

Diffuser: extra-clear tempered glass, 4 mm thick, resistant to thermal shocks and impacts (UNI-EN 12150-1: 2001).

Coating: the standard liquid immersion coating consists of a first metal surface pre-treatment stage, a successive epoxy cataphoresis corrosion and salt resistant coating, and a final layer of bi-component acrylic liquid UV-stabilised coating.

Equipment: nylon wiring plate 30% fibre glass complete with connector for mains connection and for LED module. Automatic temperature control inside the device with automatic resetting. With dedicated electronic device to protect the LED module. Equipped with an air-circulation valve.

LED: power factor: $\geq 0,9$. Photobiological safety class: exempt group.

Housing: injection moulded, in grey polycarbonate, shatter-proof, UV-stabilised, highly resistant to mechanical impacts thanks to the reinforced structure with internal ribbing.

Diffuser: transparent polycarbonate injection-moulded diffuser with grooves and internal opaque satin finish for greater lighting diffusion, V2 self-extinguished, UV stabilised, outer smooth finish for easy cleaning and to maximize lighting efficiency. Closure with clamps and stainless steel safety screws.

Reflector: in galvanised steel, previously stone-enamelled with UV-stabilised polyester resin. Clamping device manufactured directly onto the housing.

Standard supply: eco-friendly and anti-aging expanded polyurethane injected gasket. The fixing brackets for ceiling and suspension mounting are in stainless steel. Socket-plug connector. The fixture is secured to the fixing brackets through quick connectors.

LED: power factor: ≥0,95. Photobiological safety class: exempt group.

Installation example

Complete with IP67 watertight connector for line connection. Easy and quick to install.

Bitta - design Lorenzo Stano

Housing: in die-cast aluminium.

Base: in die-cast aluminium.

Column: in extruded aluminium.

Diffuser: in opal, V2 polycarbonate, shatterproof and self-extinguishing, UV-stabilised.

Coating: the standard liquid immersion coating consists of a first metal surface pre-treatment stage, a successive epoxy cataphoresis corrosion and salt resistant coating, and a final layer of bi-component acrylic liquid UV-stabilised coating.

Standard supply: the column version is equipped with anchors and socket-plug connector for quick installation.

LED: power factor ≥ 0.9 . Photobiological safety class: exempt group.

The background of the page is a photograph of a modern, curved glass revolving door. The door is made of large glass panels held together by dark metal frames. A person is captured in motion, walking through the door, which creates a blurred effect. The interior of the building is visible through the glass, showing a bright, modern space with white walls and ceiling lights. The floor outside the door is a dark, polished surface.

Strip LED

24 V constant voltage stripe, ideal for application on aluminum extrusions but also for various decorative lighting applications such as cove lighting, façade accent lighting etc.

Features and benefits :

- Extremely narrow pitch distance enables short distance to diffuser and outstanding homogeneity
- High design freedom due to 5 cm cut-options
- Self-adhesive 3M tape at the backside for simple mounting on different surfaces
- PCB to PCB and wire to PCB connectors for toolless handling and connection
- Small colour tolerance (MacAdam 3)
- System solution in combination with constant voltage LED Driver (fixed output and dimmable)
- **Connector not included**

Connector for connection of LED strip modules:

- Easy assembly: remove adhesive 3M tape on the backside of the LED Strip in the connection area, insert the LED Strip into the connector and lock it by pressing down the top of the connector.
- The insertion length of the LED Strip must be at least 4 mm (cut the LED Strip at the dotted lines).

Bell DECOR LINE

Bell is an easy-to-mount suspension luminaire ideal for any setting; extremely versatile, it can serve as an aesthetic finishing element. With these products, that combine style with functionality, the only thing left to do is choose the right LED to use.

Housing: in steel plate (Bell A-D) or aluminium (Bell B-C).

Equipment: base and cable (length 1.50 m max) for suspension.

LED - E27

- Incandescent-like colour, soft light in 2200K-2700K.
- Energy-saving, long life.
- Warm soft light in the same bulb shapes and sizes as incandescent fixtures.
- Mercury-free, in compliance with RoHS material restriction requirements.
- Applications: ideal for general ambient lighting in offices, conference rooms, restaurants, coffee shops, super markets, hotels and homes.

48V DC

The new Fosnova 48V DC spotlights mounted on low voltage Omnitrack MICRO systems make up the perfect lighting solution in settings where accent lighting with very low energy consumption must also reinforce the style and aesthetics of the room.

Housing: in die-cast aluminium, adapter included.

Casambi is an advanced automation lighting control system, the simplest and natural way to control your own lamps. It is a **bluetooth low energy (BLE)**. It is a bluetooth low energy (BLE) solution. BLE is a latest generation wireless technology and the only low-voltage wireless. Thanks to the intuitive simplicity of the app anyone can create and manage a lighting network singlehandedly by controlling every fixture individually or in groups depending on the needs and the functions required, using a smart phone or any other mobile device. *Casambi* technology can be integrated into luminaires, LED-drivers and even within LED-modules or bulbs, creating an optimal solution in terms of ease of installation and functionality with minimal additional hardware and deployment costs.

SMART

The *Casambi* devices are smart on their own. All the intelligence is replicated in each node leaving no single point of failure. The system itself is in constant consensus based synchronisation.

CONNECTED

The *Casambi* devices are connected when needed. An Internet connection is not necessary for general operation and day to day functionality. Bluetooth Low Energy is already implemented in smartphones and tablets, so communication can be done without any additional gateways.

USER FRIENDLY

The system is intuitive. When connecting for the first time nodes are automatically pairing. The system can be used and modified by anyone, no commissioning experts are needed.

WIRELESS & BLUETOOTH LOW ENERGY

The *Casambi* network is based on the Bluetooth Low Energy protocol, which is the most energy efficient and future proof of wireless technologies. The low energy functionality of **BLE** allows developers to make products that run on small coin-cell batteries or energy-harvesting devices, making BLE the best protocol to be used in wireless lighting control applications.

NO GATEWAYS

BLE was built for Internet of Things (IoT) and has been implemented in all modern smartphones, tablets and even smart watches since the beginning of 2012. This means that no gateway modules or any kind of dongle is needed to control lighting via BLE, which makes a BLE-based lighting control solution more cost effective than solutions built on other wireless technologies.

NETWORK STRUCTURE

The *Casambi* solution is based on a network structure. *Casambi* units are paired to networks. 127 units can be paired to one network. All the units that are physically in the same area, that the user wants to access at the same time or that should have the same functionality at the same time should be paired to the same network. A network should cover an area that all the users in that area are allowed to control as the access rights are defined per whole network.

COMMUNICATION

All *Casambi* units form a wireless mesh network. The mesh network contains an algorithm that drives towards a consensus state between each participant. Once consensus is reached the communication will stop. If a unit goes offline it is no longer considered to be part of the consensus group but once it comes back online it will join the group again and catch up with others. In this way the *Casambi* network is more like a consensus based synchronisation engine, rather than a classic mesh network. The communication range between two *Casambi* units is highly dependant on the surrounding and obstacles, such as walls and building materials. In indoor environments the range can be up to 30 m and in outdoor conditions up to 50 m. It is recommended to make communication tests in environments with a lot of signal disturbing materials. Longer ranges can be achieved by using multiple *Casambi* units. **It is also important to consider that in the majority of applications either the user with a smart device or adjacent luminaires containing *Casambi* units are only ever 5 to 10 meters away from each other to provide excellent reliability in the communication network.**

Bell DECOR LINE

Bell is an easy-to-mount suspension luminaire ideal for any setting; extremely versatile, it can serve as an aesthetic finishing element. With these products, that combine style with functionality, the only thing left to do is choose the right LED to use.

Housing: in steel plate (Bell A-D) or aluminium (Bell B-C).

Equipment: base and cable (length 1.50 m max) for suspension.

LED - E27

- Incandescent-like colour, soft light in 2200K-2700K.
- Energy-saving, long life.
- Warm soft light in the same bulb shapes and sizes as incandescent fixtures.
- Mercury-free, in compliance with RoHS material restriction requirements.
- Applications: ideal for general ambient lighting in offices, conference rooms, restaurants, coffee shops, super markets, hotels and homes.

Health Dark

Housing: fixed downlight in die cast aluminium.

Lens: in PMMA lens with high efficiency output and very low glare rate.

Dark light optics: in anti-glare metalized plastic material.

Equipment: equipped with galvanised steel support brackets, with housing for springs for attachment to the false ceilings.

UGR glare index: UGR<19 (in any situation). - EN 12464.

LED: power factor ≥ 0.9 . Photobiological safety class: exempt group.

ADAPT THE CURRENT TO ACHIEVE
OPTIMAL LUMINOUS FLUX

DIP SWITCH SETTING: the fixture comes with a *DIP SWITCH* driver for **THE SETTING OF THE OUTPUT CURRENT**. In this way you, can **ENSURE THE BEST LUMINOUS FLUX** for any lighting design.

The possibility to choose the correct drive current for LEDs will allow you to have the right power under specific design conditions. Using a lower current will improve the efficiency of fixtures and therefore increase energy savings, whilst a higher current will result in a higher light flux so that you can reduce the number of fixtures.

Themis

Stands out for its simple design and high-quality lighting output delivered by latest generation LED sources. Studied to deliver direct lighting, it is equipped with a highly efficient reflector (adjustable) or with lenses to enhance the light beam. Designed to be easily installed inside ceilings thanks to its mounting bracket, it is capable of illuminating full and empty spaces, bringing out all the potential of architectonic details and giving rhythm and colour to important interiors.

Housing: made of die-cast aluminium with clear polycarbonate diffuser.

Reflector: high-efficiency metallised polycarbonate.

Standard supply: ceiling version supplied with bracket for installation.

LED: power factor: $\geq 0,92$. Photobiological safety class: exempt group.

Buddy

Buddy is a wall sconce ideally suited for bedrooms. The front features a swivelling spotlight with 30° comfort optics while the back has a diffuser to emit soft indirect light, perfect for night-time use.

Housing: painted aluminium with (horizontally and vertically) swivelling front spotlight and opal polycarbonate diffuser for indirect lighting. Mobile phone/tablet charging stand, designed for wall mounting.

Standard version: with separate switching and dimming touch button for individual control of spotlight and back-light, mobile phone charging stand and 5V 1500mA USB interface (one per side).

LED: power factor >0.9. Photobiological safety class: exempt group.

The main feature of this luminaire is the "colour-changing" technology: with the built-in selector switch positioned on the fixture's body, you can choose the desired colour temperature (3000K or 4000K), adjusting its emission to most lighting installations.

Supplied standard with CCT SWITCH to choose the colour temperature from 3000K or 4000K.

IP65 protection rating with silicone rubber gasket

Snow IP65

This recessed LED spotlight is the perfect solution for installations that are designed to hide their physical presence once fitted. These spotlights are shaped to blend perfectly into the false ceilings where they are fitted. Moreover, thanks to the high **IP65** protection rating, they can be easily installed in any type of space, to create amazing light effects.

Housing: in die-cast aluminium with heat sink.

Installation: equipped with galvanised steel support brackets, with housing for springs for attachment to the false ceilings.

Equipment: silicone rubber protection gasket compliant with French low-energy building standards (**BBC**).

LED: power factor >0.9. Photobiological safety class: exempt group.

Podio

Housing/frame: in die-cast aluminium with central articulated joint in die-cast aluminium.

Base: in die-cast aluminium.

Diffuser: in extra clear tempered glass, 4 mm thick, resistant to thermal shocks and impacts.

Graphite coating: the standard liquid immersion coating consists of a first metal surface pre-treatment stage, a successive epoxy cataphoresis corrosion and salt resistant coating, and a final layer of bi-component acrylic liquid UV-stabilised coating. **Grey 9006 and white:** the standard powder coating consists of a first metal surface pre-treatment stage and of single layer of UV-stabilised, corrosion and salt resistant polyester powder coating. On request: coating COMPLIANT with UNI EN ISO 9227 Corrosion tests in artificial atmospheres for aggressive environments.

Standard Supply: electronic safety device to protect the LED module and the related ballast compliant with EN 61547.

LED: power factor ≥ 0.92 . Photobiological safety class: exempt group.

Portofino slim

Housing: in die-cast aluminium.

Column: in extruded aluminium, cylindrical section.

Base column: in die-cast aluminium with internal reinforcement ribs.

Diffuser: in vandal-resistant V2 self-extinguishing polycarbonate, UV-stabilized.

Coating: the standard liquid immersion coating consists of a first metal surface pre-treatment stage, a successive epoxy cathaphoresis corrosion and salt resistant coating, and a final layer of bi-component acrylic liquid UV-stabilised coating.

Equipment: complete with IP67 watertight connector for line connection. Easy and quick to install.

LED: power factor ≥ 0.9 . Photobiological safety class: exempt group.

The Dynamic White function allows adjusting the colour temperature from 2700K to 6500K to create a sense of the passing of time (circadian rhythm) and to set the mood and ambiance of a space according to our daily activities.

Circadian lighting obtained with the Dynamic White function is the best solution to implement Human Centric Lighting in classrooms, university campuses, offices and hospitals where lights can mimic the natural trend of daylight throughout the entire day.

Info: www.fosnova.it

The effects of the circadian rhythm disruption on health

A systematic disruption of our biological clock has negative effects on our health. Numerous studies have shown that the disruption of our sleep-wake cycle provokes fatigue and sleeping disorders. It negatively affects our mood and psychological wellbeing, and may cause anxiety or depression, as well as gastrointestinal discomfort. Moreover, if prolonged over time, it can increase the risk of cardiovascular diseases (strokes and heart attacks) and metabolic dysfunctions (such as obesity and diabetes). Lastly, it can weaken the immune system favouring the outburst of some cancers.

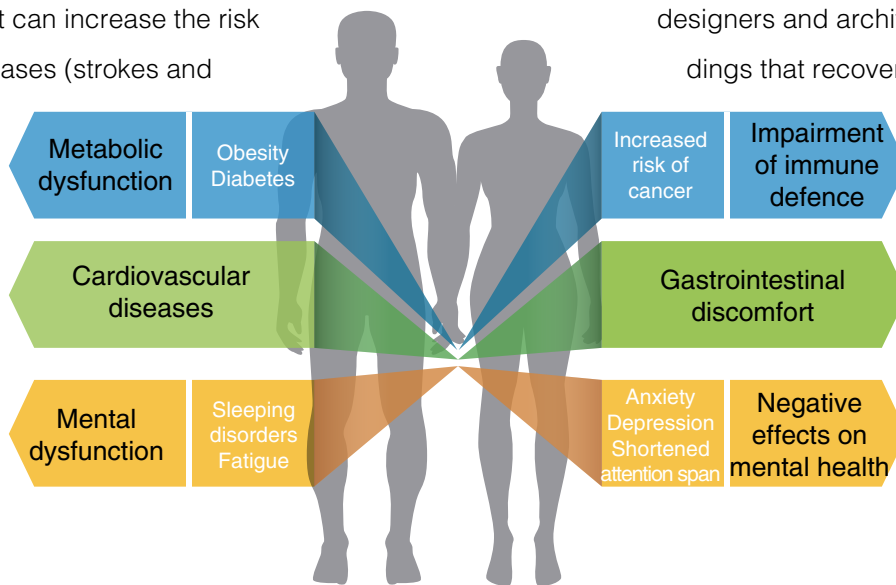

According to research, it is important that our body receives signals like daylight and its variation throughout the day.

Yet, we spend most of our time, whether at work or at home, in closed and artificially illuminated spaces.

So what can we do?

We can get a greater amount of daylight inside. This is why designers and architects are making buildings that recover as much as possible

the relationship with the outside world. And a great help is given by the technological evolution of artificial lighting, including Human Centric Lighting.

Liset 2.0 HCL - recessed - with polycarbonate diffuser

TECHNICAL CHARACTERISTICS - HCL WIRELESS VERSION

- Colour temperature adjustment range from 2700K to 6500K on a linear scale
- Full 3% to 100% dimming range
- Switch-off fading
- <4% flicker
- Constant colour temperature over the entire dimming range
- LED driver that automatically adjusts lights to the desired colour temperature and the required luminous flux

The Dynamic White function allows adjusting the colour temperature from 2700K to 6500K to create a sense of the passing of time (circadian rhythm) and to set the mood and ambiance of a space according to our daily activities.

Circadian lighting obtained with the Dynamic White function is the best solution to implement Human Centric Lighting (HCL) in classrooms, university campuses, offices and hospitals where lights can mimic the natural trend of daylight throughout the entire day.

HCL WIRELESS INSTALLATION EXAMPLE (POINT-TO-POINT)

The standard version of the fixture comes with a wireless driver. Liset 2.0 can be easily controlled from a smartphone/tablet via a **free app**.

Solus

Solus is a wall sconce with a linear design and compact dimensions. Its high degree of protection (IP54) makes it ideal for indoor and outdoor lighting applications.

Housing: in painted aluminium with matt polycarbonate diffuser, designed for wall-mounting.

LED: power factor >0.9. Photobiological safety class: exempt group.

New iSpot Comfort

Housing: made of die-cast aluminium and polycarbonate reflector.

LED: power factor >0.9. Photobiological safety class: exempt group.

Tortuga

Round-shape LED fixture with opal polycarbonate diffuser that can be easily installed to the ceiling/wall; ideal for entrance areas, corridors, stairways, waiting rooms, hotels, restaurants and residential spaces. Available in two sizes (ø305/400 mm) and in the standard 3000K/4000K version and in the 3h emergency version with light-presence sensor (ON-OFF).

Tortuga is the energy-efficient and modern alternative to luminaires with traditional light sources.

Housing: vandal-resistant, self-extinguishing polycarbonate.

Diffuser: In clear polycarbonate, anti-dazzle, vandal resistant.

LED: power factor >0.9. Photobiological safety class: exempt group.

Pastilla

Pastilla is a high-efficiency LED fixture, an ideal upgrade solution to traditional lamps. Its simple yet modern design, along with the supplied bracket, ensures quick installation into different spaces, including corridors, stairways, bathrooms, entrance halls or public areas. It is available in three diameter sizes (ø220/280/330 mm) and in the standard 3000K/4000K version, or with light-presence detectors (ON-OFF) on request.

Housing: vandal-resistant, self-extinguishing polycarbonate.

Diffuser: In clear polycarbonate, anti-dazzle, vandal resistant.

LED: power factor >0.9. Photobiological safety class: exempt group.

CORTEN RAL 8015 GREY RAL 8015 SILVER RAL 9006

Built-in RADAR SENSOR (sub-code -19): is an automatic sensor that immediately sense the presence of people's movements and anyone walking past. When there is movement within the sensor's detection range, the light will remain ON. When no further movement is detected, the light will switch OFF after a pre-set time.

Upon request: EM version (sub-code -07).

DETECTION AREA: is the area scanned by the sensor. It can be adjusted for specific applications by combining DIP switches.

HOLD-TIME: is the period of time the light will stay ON after the sensor has been triggered.

DAYLIGHT THRESHOLD: Disable, motion detection only.

Wall installation.

Ceiling installation.

Factory settings: Detection distance: 8m - Hold time: 5sec			
Power	220-240V AC 50/60 Hz	Mounting height	wall: 4m ceiling: 5 m
Frequency	5,8GHz CW Radar, ISM band - 0,2 - <10 mW	Nominal load	800 W (resistive) 400 W (inductive)
Detection area	ceiling: 30°-150°	Energy consumption	<0,5 W
Detection distance (adjustable)	ceiling: Ø 1-8 m	Hold Time (adjustable)	5s, 90s, 5min., 15min.

Oblò J 2.0

Housing: vandal-resistant, self-extinguishing polycarbonate.

Diffuser: In clear polycarbonate, anti-dazzle, vandal resistant.

LED: power factor ≥ 0.9 . Photobiological safety class: exempt group.

Built-in RADAR SENSOR (sub-code -19): an electronic device that immediately detects any presence entering its range. When the sensor reads motion inside its range, lights will stay on. When it no longer senses motion and based on the lighting level in its range, the sensor will turn off the lights after a pre-programmed time.

SENSOR - TECHNICAL SPECIFICATIONS

Detection area	360°
Detection distance	Ø 1-10 m (adjustable)
Hold time	10 sec - 30 min
Ambient light	2 ~ 2000 Lux
Power consumption	~ 0.9 W
High frequency (HF system)	5.8GHz CW radar, ISM band
Operating temperature	-15°C ÷ 70°C
